

Supplementary Table 5: GRADE evidence profile predictors of aggressive behaviour

Certainty assessment						
Participants (studies)	Risk of bias	Inconsistency	Indirectness	Imprecision	Publication bias	Overall certainty of evidence
161 cases, 2339 controls (4 non-randomised studies)	serious <sup>a</sup>	serious	not serious	serious <sup>b</sup>	publication bias strongly suspected	⊕○○○ Very low

**Explanations**

- a. Mostly concerns on study attrition and outcome measurement
- b. Concerns on small number of patients and wide confidence intervals
