

**Supplementary Table 9: GRADE evidence profile parathyroid allotransplantation**

Certainty assessment						
Participants (studies)	Risk of bias	Inconsistency	Indirectness	Imprecision	Publication bias	Overall certainty of evidence
109 (3 non-randomised studies)	serious <sup>a</sup>	not serious	not serious	serious <sup>b</sup>	none	⊕○○○ Very low <sup>a,b</sup>

**Explanations**

- a. Concerns on patient selection, confounding factors, homogeneity of intervention (re-transplantations), measurement of outcome
- b. Concerns on small sample sizes
