# **Because Hormones Matter**

What are they and how do they impact our lives?

Pituitary gland

Thyroid gland

Parathyroid glands

Pancreas

Ovaries

Adipose tissue

#### How do hormones work?

• Hormones are biological messengers that travel throughout the body, telling our cells and organs what to do.

- · Hormones are essential. They:
  - help us grow and mature
  - cope with stress
  - help us stay fit and healthy
  - manage our metabolism
  - determine our sexual function
- · There are many hormones, each with its own essential function.

Insulin Cortisol Testosterone Leptin Adrenaline Oestrogen Melatonin Prolactin Thyroxine Growth Hormone and many more

# disorders?

- Endocrine disorders are caused and characterised by abnormal (too high / too low) hormone levels.
- diabetes, thyroid disease, cancer, growth disorders, hypertension, osteoporosis, infertility and sexual dysfunction, and many rare diseases.
- · More than three quarters of the population will need an endocrinologist at some point in their life.

 Endocrinology is the study of hormones in the human body and their roles in health and disease.

• Endocrine disorders include obesity,

### **Because Hormones Matter**

It is time to recognise the role of hormones in preventing, treating and living with some of the most prevalent diseases in the world.

leading cause of death and morbidity in Europe 1

Median survival of neuroendocrine tumours is

41 months

cases

per year

per year

More than

thyroid cancer per year

#### **POLICY ASK**

Strengthen the endocrine perspective and acknowledge endocrine cancers in the Beating Cancer Plan and Horizon Europe research calls.

# **Endocrine Disrupting Chemicals**

### Between €157 and € 270 billion per year

in health care expenses and lost earning potential in Europe

#### **POLICY ASK**

Implement all legislation relevant to EDCs without any further delay to ensure a more healthy and sustainable European society for the current as well as future generations.

## **Obesity**

Those living with obesity have been found to have a life expectancy five years weight status<sup>v</sup>

In Europe, 2010,01010

new cancer cases are linked to obesity per year

In adults, a 5-10% weight loss

may lead to health benefits from decreasing obesityrelated comorbidities

Overweight and obesity cause more

than 1.2 million deaths across the WHO European Region every year

**, ^^** 

Almost 10 of adults and nearly 3 children live with obesity or overweight in Europe

#### **POLICY ASK**

Recognise obesity as a chronic relapsing endocrine disease by all stakeholders at European and national levels, focus on prevention and develop new treatment options.

### Rare Endocrine Diseases

Rare diseases affect approximately

related to the endocrine system<sup>ix</sup>

Rare diseases are often chronic and life-threatening. Key issues to address are:

 late diagnosis need for access to expert centres • many diseases have no cure

#### **POLICY ASK**

Allocate the resources to mature the critical role of the European Reference Networks, drive the development of registries and innovation in diagnosis and treatment.
